Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-9, drawn to a method of evaluating positionally related assay data, classified in class 702, subclass 19.
- II. Claims 10-16, 25-32 and 42-49, drawn to methods of positionally correcting assay data wherein the steps include deconstructing plate effects and employing residual data values; as well as the computer, and software to implement the method, classified in class 702, subclass 19.
- III. Claims 17-24, 33-41 and 50-58, drawn to methods of positionally correcting assay data wherein the steps include resistantly fitting the data to particular curves, several steps of longitudinal smoothing, and substitution; as well as the computer and software to implement the method, classified in class 702, subclass 19.

The inventions are distinct, each from the other because of the following reasons:

Each of Inventions I-III are separate and patentably distinct as they are drawn to differing methods, having differing goals, requiring differing mathematical calculations and steps such that the search and examination thereof does not necessarily overlap. Methods of evaluating data which do not include steps of actually changing, fitting, or correcting that data are clearly distinct from methods that require such steps. Within Groups II and III, the steps for the correction of the data appear to be quite different, and non-overlapping.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.
